

CANDIDATE / AUTHOR	HIRING MANAGER	TARGET PARTNER FLEETS	STRATEGIC FRAMEWORK
Sandro Tanis (PSA)	Rahul (Cloudflare PSA Leader)	Kyndryl, Lumen, AT&T, Verizon	30-60-90 Day Plan & Design Thinking

🕒 Executive Summary: Translating Architecture into Partner Profitability

Global Systems Integrators (GSIs like **Kyndryl** and **NTT DATA**) and Service Providers (Telcos & Carriers like **Lumen**, **AT&T**, and **Verizon**) experience severe margin compression when delivering bespoke enterprise security and AI stacks, taking 4–6 weeks per client while delivery labor consumes ~65% of billable revenue. This live prototype demonstrates how Cloudflare Partner Solutions Architecture solves this with a **declarative, repeatable reference architecture**. Standardized baselines defined at the Cloudflare Organization level fan out across child accounts via Tenant APIs, enabling partners to onboard in **< 5 minutes**, maintain **99.4% zero-drift telemetry**, and expand net profit margins from **35% to 75%** (+114% net profit increase).

SUPPORTED PARTNER ALLIANCES (7 TOTAL):	Service Providers (3): Lumen • AT&T • Verizon	GSIs (2): Kyndryl • NTT DATA	MSSP & PowerUP (2): Assurance Data • Yakuq

STEP 1

Open the Executive Presentation Deck (Header Button)

When you open the demo at repeatable.shanezerotrust.com, click "Presentation Slides" in the top-right corner. It walks through a 4-slide executive business case designed specifically for partner leadership:

SLIDE 1 Executive Overview +114% profit boost, < 5 min onboarding, and 99.4% drift-free telemetry health across the fleet.	SLIDE 2 4 Core Value Props Margin Expansion (35% → 75%), Speed-to-Market, Zero Drift, and AI Practice Monetization.	SLIDE 3 Business Case Table Side-by-side comparison for 48 Enterprise Clients: Manual vs. Cloudflare Automation (+\$2.88M/yr gain).	SLIDE 4 Monthly Cash Flow Cash flow model: End clients pay \$1.18M/mo, Cloudflare receives \$580k/mo PIO, partner nets \$450k/mo profit.
--	---	---	--

OPERATIONAL METRIC	WITHOUT AUTOMATION (MANUAL BESPOKE)	WITH CLOUDFLARE AUTOMATION	BUSINESS IMPACT / PARTNER VALUE
Monthly Gross Billings	\$600,000 / mo (\$7.20M / yr)	\$600,000 / mo (\$7.20M / yr)	Identical client billing (\$12.5k/client/mo)
Onboarding Time / Client	4 to 6 Weeks	< 5 Minutes	99% Faster Time-to-Market
Engineers Needed (48 Clients)	17 to 22 Dedicated Engineers	2 to 3 Engineers	15+ Engineering Headcount Saved
Cost of Delivery (% Revenue)	65% (\$390,000 / mo)	25% (\$150,000 / mo)	\$240,000 / mo Delivery Labor Savings
Monthly Net Profit	\$210,000 / mo (\$2.52M / yr)	\$450,000 / mo (\$5.40M / yr)	+114% Net Profit Boost (+\$240k/mo)
Annual Net Profit & Gain	\$2,520,000 / yr	\$5,400,000 / yr	+\$2,880,000 / yr Net Profit Gain
Profit Margin %	35% Net Margin	75% Net Margin	+40 Percentage Points Margin Expansion

1. END CLIENTS PAY PARTNER \$1.18M / mo \$14.16M / yr Total Joint Bundle	2. PARTNER PAYS CLOUDFLARE (PIO) \$580k / mo \$6.96M / yr Cloudflare Software ACV	3. PARTNER RETAINS NET PROFIT \$450k / mo \$5.40M / yr Net Profit (~75% Margin)
---	--	--

STEP 2 Review the Live TAP & Financial Economics Panel

On the main screen, the **Target Account Program (TAP) Panel** translates technical infrastructure directly into P&L language for Kyndryl, Lumen, AT&T, and Verizon leadership:

CLOUDFLARE PIO

\$6.96M – \$8.68M / yr

\$580k–\$723k/mo subscription ACV across enterprise customer fleets

PARTNER GROSS REVENUE

\$600k – \$784k / mo

\$7.20M–\$9.41M/yr billable managed services (\$12.5k–\$14k/unit/mo)

PARTNER NET PROFIT

\$450k – \$604k / mo

\$5.40M–\$7.25M/yr at 75%–77% margin (cost slashed from 65% to ~25%)

ARCHITECTURAL HEALTH

99.4% – 99.6%

Autonomous zero-drift telemetry across all deployed child accounts

STEP 3 Test Multi-Pillar Practice Switching (Top Tabs)

In the top bar, toggle between the three distinct joint practice offerings. Notice how **all financial economics, offering titles, telemetry badges, and Terraform snippets dynamically recalculate** with complete mathematical consistency:

DEFAULT OFFERING

Dual-Pillar (CF1 + AI)

Cloudflare PIO: \$145k–\$155k / unit / yr (\$7.0M–\$8.7M fleet)
Partner MRR: \$12.5k–\$14.0k / unit / mo (\$600k–\$784k fleet)
Net Margin: 75%–77% (\$450k–\$604k/mo net profit)

Complete enterprise defense: Combines Cloudflare One SASE with enterprise AI Gateway protection, audit logging, and LLM rate-limiting.

CORE SASE TRACK

Cloudflare One (SASE)

Cloudflare PIO: \$92k–\$100k / unit / yr (\$4.4M–\$5.6M fleet)
Partner MRR: \$7.8k–\$8.8k / unit / mo (\$374k–\$493k fleet)
Net Margin: 72%–74% (\$270k–\$365k/mo net profit)

Core network modernization: Zero Trust Network Access (ZTNA), Secure Web Gateway (SWG), WAF, Magic WAN, and DNS filtering.

EMERGING AI TRACK

AI Infrastructure & Safety

Cloudflare PIO: \$52k–\$55k / unit / yr (\$2.5M–\$3.1M fleet)
Partner MRR: \$4.7k–\$5.2k / unit / mo (\$226k–\$291k fleet)
Net Margin: 79%–81% (\$178k–\$236k/mo net profit)

Cloud-native AI Gateway, Prompt Guard, Vectorize, and Workers AI integration to secure and observe enterprise generative AI pipelines.

STEP 4 Test Fleet Scaling (Slider & Quick Presets)

Use the quick preset buttons ([12], [24], [48 (Deck)]) or drag the interactive fleet slider up to 60 accounts. Notice how Cloudflare Organizations fan out identical baseline policies across child accounts (labeled as *Enterprise Accounts* for GSIs or *Tenants* for Service Providers like Lumen, AT&T, and Verizon). This proves how multi-tenant architecture decouples partner revenue growth from linear headcount hiring.

STEP 5 Inspect the Declarative Config-as-Code (Bottom Terminal)

Review the single-source Terraform snippet at the bottom. It illustrates how the partner defines the module once at the Organization level and dynamically loops over `cloudflare_account.customer` using Cloudflare’s Tenant API:

```
main.tf - Cloudflare Organizations Declarative Multi-Tenant Blueprint
Terraform / HCL

# One blueprint, every customer - Cloudflare Organizations (GSI & Service Provider Tier)
# Partner: Kyndryl / Lumen / AT&T / Verizon | Mode: DUAL-PILLAR (CF1 + AI)

resource "cloudflare_account" "customer" {
  for_each = var.customers      # Child accounts under the partner Organization
  name     = each.value.name
}

# 1. Cloudflare One (SASE / Zero Trust Baseline) - Defined once, inherited by all
module "partner_sase" {
  for_each = cloudflare_account.customer
  source   = "../modules/partner-sase"
  account_id = each.value.id      # WAF · Zero Trust · Access · Gateway
}

# 2. Enterprise AI Protection & Gateway Baseline - Guardrails & Rate Limiting
resource "cloudflare_ai_gateway" "enterprise_ai_shield" {
  for_each = cloudflare_account.customer
  account_id = each.value.id
  id        = "${var.partner_id}-ai-gateway-default"
  rate_limit = 1000              # Protect client LLMs from overload & budget spikes
  collect_logs = true
}
```

Direct Alignment: 30-60-90 Day PSA Plan & Design Thinking

Days 1–30: Discover & Define

Interview practice leads at Kyndryl, Lumen, AT&T & Verizon to baseline delivery costs (65% manual overhead), uncover onboarding bottlenecks, and align joint PIO targets.

Days 31–60: Design & Co-Build

Package repeatable Terraform modules and Cloudflare One + AI Gateway reference architectures into partners’ catalogs of billable Managed Security Services.

Days 61–90: Deliver & Scale

Train partner delivery architects, operationalize zero-drift telemetry, and scale customer fleets from pilots to 48–60+ accounts to unlock \$7M–\$9M in recurring PIO.
